ARB Winch Cable Damper

Seattle, WA - Those that regularly head off the beaten track know how essential it is to be prepared for a recovery situation. And one of the most important safety items for a recovery kit is a winch cable damper. Winching or snatching places a tremendous amount of pressure on equipment, and over time, cables and straps can gradually weaken.

In the unlikely event of a wire rope or snatch strap failure, the amount of energy stored in the cable can make it very dangerous. A damper will significantly reduce the recoil, making it less likely to cause any serious damage.

ARB's new winch cable damper has been designed for maximum durability and practicality. Manufactured from heavy duty vinyl with silver reflective tape for night time visibility, it can be worn over the shoulders and features handy storage pockets, useful for carrying heavy items to and from the anchor point. The damper is also perfect for competitions, and was extensively used at this year's running of Australia's prestigious ARB Warn Outback Challenge.

Replacing part number ARB219, the new damper can be ordered using part number ARB220.
